| 1.4<br>On-farm Hazard<br>Analysis | Comprehensive on-farm and facility review of all potential hazards that may impact food safety has been completed and independently reviewed.   | Key potential hazards, identified by general GAPs guidance documents, have been reviewed. A plan for further action has been prepared with clear responsible individuals and timelines.  | No actions have been taken.  |
| 1.5<br>GAPs<br>Record Keeping     | Production and farm records demonstrate clear incorporation and of food safety objectives into management system. Commitment to all phases of risk reduction is independently verifiable through periodic audits. Records of sanitation supplies and facility servicing, all pesticide and foliar application records are current, worker training verification, all soil amendment, and water quality monitoring, and equipment cleaning and maintenance are kept in organized and accessible files. | Records of sanitation supplies and facility servicing, all pesticide and foliar application records are current, all fertility management practices and dates are recorded, all soil amendment, and water quality monitoring are kept in organized and accessible files. | All pesticide and foliar application records are kept in organized and accessible files. |

| <b>_</b>           |  |  |   |
| 3.1<br>Manure Use  | Risk reduction practices for manure storage and application have been incorporated into an on-farm standard operating procedure (SOP). No non-composted manure is spread or incorporated within 30 days of seeding or transplanting and 60 days of harvest. OR – No animal manure- based soil amendments and no manure extracts or teas are or have been used at any time. | Target  No manure is spread or incorporated within 60 days of harvest. Risk reduction practices for manure storage and application have been identified and initiated on higher risk crops (i.e. leafy greens and herbs). Manure is sourced from a known supplier and all handling practices and duration of "aging" is known and documented. OR – No animal manure-based soil amendments and no manure extracts or teas are used at any time. | Owners and production managers have reviewed the GAP Quick Start Guide Section 3 and sources to learn about risk reduction practices have been identified. No manure is spread or incorporated within 60 days of harvest. |
|                    |  |  |   |
| 3.2<br>Compost Use | Compost is produced, or sourced from a Certified supplier, under standards that meet or exceed CIWMB Title 14 Code and testing standards of the US Compost Council. Documentation of process controls, pathogen reduction, and required  | Compost is sourced from a Certified supplier and complete Certificates of Analysis are available. OR – No animal compostbased soil amendments and no compost extracts or teas used at any time.  | Owners and production managers have reviewed the GAP Quick Start Guide Section 3 and identified sources to learn about certification and record-keeping. Composted material is used but recordkeeping                     |

GAP Quick Start Grower Guide

# Portable Toilet Availability & Quality

facility toilets and hand-washing stations are widely accessible in all production blocks and equipment facilities/areas OR are accessible within a five (5) minute drive by vehicle or farm-**ATV** bike AND meet all OSHA and CAL **OSHA** requirements for distance, design, stocking of supplies, and provisions for sanitary servicing. Additional facilities are located in production blocks during peak activities, if needed. A standard and consistent location relative to block layout is designated and communicated to supervisors and workers. Portable facilities are consistently maintained in a condition of cleanliness that projects management commitment to worker comfort and dignity.

facility toilets and hand-washing stations are accessible in production blocks and equipment facilities/areas under active daily management OR are accessible within a five (5) minute drive by vehicle or farm-ATV bike AND meet all OSHA and CAL OSHA requirements for distance, design, stocking of supplies, and provisions for sanitary servicing. A standard and consistent location relative to block layout is designated and communicated to supervisors and workers.

facility toilets and hand-washing stations are accessible within a five (5) minute drive by vehicle or farm- ATV bike AND meet all OSHA and CAL **OSHA** requirements for distance, design, stockina of supplies, and provisions for sanitary servicing.

|                            | 2.6                               |   |   |                                  |   |                                 |

The above chart is an example of a typical, developing GAP-compliant operation in California. Individual Section ratings may vary and the color-coding provides a quick visual guide to key areas where more attention is needed to maximize risk reduction. If your Self-Audit has more than 30% Red in any Section or overall, it is in your best business interest to seriously begin to understand and implement the practices outlined in the UC GAP Quick Start Guide.

If any, and especially if many, of your responses couldn't honestly even fit into the Get Moving Now option, it is critical that you obtain professional assistance to prioritize and address the key concerns outlined in these Sections.
