Medusahead is a rapidly spreading winter annual grass. This noxious weed is a major catalyst for wildland fire and is non-palatable to livestock. Medusahead establishes thick thatch layers and can outcompete native communities, especially in areas with disturbance. Medusahead poses a serious threat to Nevada’s natural and agricultural resources.

Medusahead Locations

Acres Infested:
- 0 - 59
- 60 - 320
- 321 - 1052
- Unknown Size

Current Area Infested (2019) = 9,496 Acres
